PROFESSIONAL SUMMARY

IT/ITSM professional transitioning into cybersecurity and security operations, with experience supporting enterprise IT operations, ITSM processes, incident and service request management, troubleshooting, documentation, and operational reporting. Completed the Google Cybersecurity Professional Certificate, with hands-on training in security fundamentals, Linux, networking, Python security automation, SQL, access control, network traffic analysis, incident analysis, security risk assessment, and SIEM fundamentals. Seeking an entry-level SOC Analyst or Cybersecurity Analyst role where I can apply my IT operations background and continue developing practical security monitoring and investigation skills.

TECHNICAL SKILLS

Cybersecurity & Security Operations: Security fundamentals, incident analysis, incident reporting, incident response fundamentals, security risk assessment, security controls, vulnerability assessment fundamentals, NIST Cybersecurity Framework concepts, access control, authentication, authorization, least privilege, SIEM fundamentals, security log analysis, security event analysis

Networking: TCP/IP, DNS, UDP, ICMP, network traffic analysis, tcpdump, source/destination analysis, network troubleshooting

Linux: Linux command line, file permissions, chmod, chown, user management, group management, adduser, usermod, sudo, authentication, authorization, least privilege

Programming & Security Automation: Python, file handling, lists, loops, conditional statements, security automation

Database: SQL fundamentals, security-related SQL analysis

IT Operations & ITSM: ITSM, Freshservice, incident management, service request management, ticket management, ticket assignment and escalation, asset management, IT documentation, IT KPI reporting, Windows support, hardware/software troubleshooting, printer support, network troubleshooting, Microsoft Office, IT infrastructure support

PROFESSIONAL EXPERIENCE

IT Support / ITSM Administrator — Gulf Cement Company (GCC), UAE | November 2025 – Present

- Administer ITSM processes using Freshservice, supporting incident and service request management.
- Assign and escalate tickets according to operational requirements while maintaining consistent resolution tracking.
- Maintain IT documentation and asset records to support IT asset inventory and operational visibility.
- Prepare IT KPI reports and operational documentation for management review.
- Provide IT support and troubleshoot hardware, software, Windows systems, printers, and user issues.
- Troubleshoot network connectivity and Wi-Fi issues; support installation and configuration of printers and other IT equipment.
- Assist with Windows system setup, resets, software installation, and troubleshooting.
- Support users with Microsoft Office and enterprise applications while assisting with IT infrastructure and operational support activities.

CYBERSECURITY PROJECTS & HANDS-ON LABS

Hands-on training projects and labs completed as part of the Google Cybersecurity Professional Certificate — not professional employment.

Python IP Allow-List Automation | Python | File Handling | Access Control | Security Automation

- Developed a Python script to automate updates to an IP allow-list by reading addresses from a file and removing entries present on a separate removal list.
- Applied Python file handling, lists, loops, and conditional statements to support access-control automation in a simulated environment.
- Demonstrated how automation can reduce manual effort and potential errors when maintaining access-control records.

Network Traffic Analysis & Incident Report | tcpdump | DNS | UDP | ICMP | Network Traffic Analysis | Incident Reporting

- Analyzed tcpdump network traffic logs to investigate DNS, UDP, and ICMP communication patterns.
- Interpreted ICMP responses and traced source/destination communication for network investigation and troubleshooting.
- Documented findings in a structured incident report explaining observed traffic patterns and likely causes.

Botium Toys Security Risk Assessment (Simulated Organization) | *Risk Assessment | NIST CSF | Security Controls | Compliance*

- Defined audit scope and security goals for a simulated organization as part of a security risk assessment exercise.
- Identified organizational assets and evaluated security controls against compliance and best-practice expectations.
- Produced a structured risk assessment report referencing NIST Cybersecurity Framework concepts.

SIEM & Security Log Analysis Fundamentals

- Studied security event and log analysis concepts, including authentication events, suspicious activity identification, event correlation concepts, and structured investigation of security-relevant logs.

Linux File Permissions & Access Control

- Configured Linux file and directory permissions using `chmod` and applied ownership-based access control using `chown`.
- Practiced least-privilege access principles across a simulated Linux environment.

Linux User & Group Management

- Created and managed Linux users and groups using `adduser` and `usermod`, configuring primary and secondary group membership.
- Applied `sudo` for privileged actions and reinforced authentication and authorization concepts.

Incident Report Analysis

- Reviewed evidence from a simulated security incident, identified key findings, and documented results in a structured incident report.

CERTIFICATION

Google Cybersecurity Professional Certificate | *Google / Coursera*

Completed cybersecurity training covering security fundamentals, networking, Linux, Python, SQL, security risk assessment, network traffic analysis, access control, incident analysis, and practical security exercises.

EDUCATION

B.Tech, Electronics and Communication Engineering | *Presidency University, Bengaluru* | *Graduated June 2023* | *CGPA: 6.69*

ACADEMIC PROJECTS

- IoT-Based Automation — final-year engineering project exploring device automation.
- Temperature and Humidity Monitoring Using Cloud — sensor-based monitoring system with cloud data logging.
- Crime/Anomaly Activity Detection Through Video — video-analysis approach for identifying anomalous activity.
